## EXPLANATION:

This project is a responsive AJIO-inspired online shopping website developed using HTML, CSS, and JavaScript. HTML is used to create the structure of the website using tags such as `<nav>` for the navigation bar, `<section>` for different webpage sections like hero, categories, products, about, and newsletter, `<div>` for layout containers, `<ul>` and `<li>` for navigation menus, `<a>` for links and buttons, `<img>` for displaying images, `<button>` for interactive actions, `<form>` and `<input>` for newsletter subscription, and `<footer>` for contact and website information. CSS is used to style the entire

website by adding colors, layouts, Flexbox positioning, animations, hover effects, gradients, shadows, responsive design, product card styling, image effects, and mobile-friendly media queries. JavaScript is used to add interactivity and dynamic functionality such as the sticky navbar effect during scrolling, hamburger menu toggle on mobile devices, automatic and manual hero image slider, category-based product filtering, cart count update, toast notification popup, newsletter email validation, smooth scrolling between sections, and scroll reveal animations for product cards. Overall, the project demonstrates frontend web development skills including semantic HTML structure, modern CSS styling, responsive web design, DOM manipulation, event handling, animations, filtering systems, and interactive user interface design to create a visually appealing and user-friendly e-commerce shopping website.
